

Science Progression

Biology	Plants, Animals including humans, Living things and their habitats, Evolution and inheritance
Physics	Everyday materials, Seasonal changes, Light, Forces, Sound, Electricity, Earth and space
Chemistry	Rocks, States of Matter
Working Scientifically	Key Stage 1, Lower Key Stage 2, Upper Key Stage 2

Plants	Progression
EYFS	EYP: To observe and investigate some flowering plants and trees. Provide opportunities to take care of flower beds and the raised beds.
Year 1	P1: identify and name a variety of common wild and garden plants, including deciduous and evergreen trees. P2: identify and describe the basic structure of a variety of common flowering plants, including trees. P3: Observe and record changes over time of trees/plants/bulbs/growing plants.
Year 2	P4: observe and describe how seeds and bulbs grow into mature plants. P5: find out and describe how plants need water, light and a suitable temperature to grow and stay healthy. Working scientifically: observing and recording, with some accuracy, the growth of a variety of plants as they change over time from a seed or bulb or observing similar plants at different stages of growth; setting up a comparative test to show that plants need light and water to stay healthy.
Year 3 & 4	P6: identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers. P7: explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant. P8: investigate the way in which water is transported within plants. P9: explore the part that flowers play in the life cycle of flowering plant, including pollination, seed formation and seed dispersal. Notes: Pupils should be introduced to the relationship between structure and function: the idea that every part has a job to do. They should explore questions that focus on the role of the roots and stem in nutrition and support, leaves for nutrition and flowers for reproduction. Pupils can be introduced to the idea that plants can make their own food, but at this stage they do not need to understand how this happens. Working Scientifically: Pupils might work scientifically by: comparing the effect of different factors on plant growth, for example, the amount of light, the amount of fertiliser; discovering how seeds are formed by observing the different stages of plant life cycles over a period of time; looking for patterns in the structure of fruits that relate to how the seeds are dispersed. They might observe how water is transported in plants, for example, by putting cut, white carnations into coloured water and observing how water travels up the stem to the flowers.
Year 5 & 6	No content

Animals including humans	Progression
EYFS	EYA: To identify and name some outer parts of the human body.
Year 1	A1: identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals. A2: identify and name a variety of common animals that are carnivores, herbivores and omnivores. A3: describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). A4: identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense. Vocabulary: head, neck, arms, elbows, legs, knees, face, ears, eyes, hair, mouth, teeth
Year 2	A5: notice that animals, including humans, have offspring which grow into adults A6: find out about and describe the basic needs of animals, including humans, for survival (water, food and air) A6: describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene. Vocabulary: egg, chick, chicken; egg, caterpillar, pupa, butterfly; spawn, tadpole, frog; lamb, sheep. Growing into adults can include reference to baby, toddler, child, teenager, adult.
Year 3	A7: identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat. A8: identify that humans and some other animals have skeletons and muscles for support, protection and movement. Notes: Pupils should continue to learn about the importance of nutrition and should be introduced to the main body parts associated with the skeleton and muscles, finding out how different parts of the body have special functions. Working Scientifically: identifying and grouping animals with and without skeletons and observing and comparing their movement; exploring ideas about what would happen if humans did not have skeletons. They might compare and contrast the diets of different animals (including their pets) and decide ways of grouping them according to what they eat. They might research different food groups and how they keep us healthy and design meals based on what they find out.
Year 4	A9: describe the simple functions of the basic parts of the digestive system in humans. A10: identify the different types of teeth in humans and their simple functions. A11: construct and interpret a variety of food chains, identifying producers, predators and prey. Notes: Pupils should be introduced to the main body parts associated with the digestive system, for example, mouth, tongue, teeth, oesophagus, stomach and small and large intestine and explore questions that help them to understand their special functions. Working Scientifically: comparing the teeth of carnivores and herbivores and suggesting reasons for differences; finding out what damages teeth and how to look after them. They might draw and discuss their ideas about the digestive system and compare them with models or images.
Year 5	A12: describe the changes as humans develop to old age. Notes: Pupils should draw a timeline to indicate stages in the growth and development of humans. They should learn about the changes experienced in puberty. Working Scientifically: researching the gestation periods of other animals and comparing them with humans; by finding out and recording the length and mass of a baby as it grows.
Year 6	A13: identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood. A14: recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function. A15: describe the ways in which nutrients and water are transported within animals, including humans.

	Notes: Pupils should build on their learning from years 3 and 4 about the main body parts and internal organs (skeletal, muscular and digestive system) to explore and answer questions that help them to understand how the circulatory system enables the body to function. Pupils should learn how to keep their bodies healthy and how their bodies might be damaged – including how some drugs and other substances can be harmful to the human body. Working Scientifically: exploring the work of scientists and scientific research about the relationship between diet, exercise, drugs, lifestyle and health.
--	---

(Uses of) Everyday materials/Properties	Progression
EYFS	EYM: Explore and investigate some objects and know what materials they are made from. Vocabulary: materials, rigid, rough, waterproof
Year 1	M1: distinguish between an object and the material from which it is made. M2: identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock. M3: describe the simple physical properties of a variety of everyday materials. M4: compare and group together a variety of everyday materials on the basis of their simple physical properties. Vocabulary: hard/soft; stretchy/stiff; shiny/dull; rough/smooth; bendy/not bendy; waterproof/not waterproof; absorbent/not absorbent; opaque/transparent Questions: : ‘What’s the best material for an umbrella?’ ..for lining a dog basket? ...for curtains? ...for a bookshelf? ...for a gymnast’s leotard?’
Year 2	M5: identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses M6: find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching. Vocabulary: (metal can be used for coins, cans, cars and table legs; wood can be used for matches, floors, and telegraph poles) or different materials are used for the same thing (spoons can be made from plastic, wood, metal, but not normally from glass). Scientist focus: Pupils might find out about people who have developed useful new materials, for example John Dunlop, Charles Macintosh or John McAdam. Working scientifically: Pupils might work scientifically by: comparing the uses of everyday materials in and around the school with materials found in other places (at home, the journey to school, on visits, and in stories, rhymes and songs); observing closely, identifying and classifying the uses of different materials, and recording their observations.
Year 5	M6: compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. M7: know that some materials will dissolve in liquid to form a solution and describe how to recover a substance from a solution. M8: use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating. M9: give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic. M10: demonstrate that dissolving, mixing and changes of state are reversible changes. M11: explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda. Notes: Pupils should build a more systematic understanding of materials by exploring and comparing the properties of a broad range of materials, including relating these to what they learnt about magnetism in year 3 and about electricity in year 4. They should explore reversible changes, including, evaporating, filtering, sieving, melting and dissolving, recognising that melting and dissolving are different processes. Pupils should explore changes that are difficult to reverse, for example, burning, rusting and other reactions, for example, vinegar with bicarbonate of soda. They should find out about how chemists create new materials, for example, Spencer Silver, who invented the glue for sticky notes or Ruth Benerito, who invented wrinkle-free cotton. Pupils are not required to make quantitative measurements about conductivity and insulation at this stage. It is sufficient for them to observe that some conductors will produce a brighter bulb in a circuit than others and that some materials will feel hotter than others when a heat source is placed against them. Safety guidelines should be followed when burning materials. Working Scientifically: carrying out tests to answer questions, for example, ‘Which materials would be the most effective for making a warm jacket, for wrapping ice cream to stop it melting, or for making blackout curtains?’ They might compare materials in order to make a switch in a circuit. They could observe and compare the changes that take place, for example, when burning different materials or baking bread or cakes. They might research

	and discuss how chemical changes have an impact on our lives, for example, cooking, and discuss the creative use of new materials such as polymers, super-sticky and super-thin materials.
--	--

Seasonal Changes	Progression
EYFS	EYSC: Explore the seasons through observation of the local outdoor area.
Year 1	SC1: observe changes across the four seasons. SC2: observe and describe weather associated with the seasons and how day length varies, making tables and charts about the weather; and making displays of what happens in the world around them, including day length, as the seasons change.

Living things and their habitats	Progression
----------------------------------	-------------

EYFS	EYLH: To explore habitats and their animals in their immediate environment.
Year 1	No content
Year 2	LH1: explore and compare the differences between things that are living, dead, and things that have never been alive. LH2: identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. LH3: identify and name a variety of plants and animals in their habitats, including microhabitats. Pupils should compare animals in familiar habitats with animals found in less familiar habitats, for example, on the seashore, in woodland, in the ocean, in the rainforest. LH4: describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food. Vocabulary: ‘habitat’ (a natural environment or home of a variety of plants and animals) and ‘micro-habitat’ (a very small habitat, for example for woodlice under stones, logs or leaf litter).
Year 3	No content
Year 4	<u>Living things and their habitat</u> LH5: recognise that living things can be grouped in a variety of ways. LH6: explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. LH7: recognise that environments can change and that this can sometimes pose dangers to living things. Notes: Pupils should use the local environment throughout the year to raise and answer questions that help them to identify and study plants and animals in their habitat. They should identify how the habitat changes throughout the year. Pupils should explore possible ways of grouping a wide selection of living things that include animals and flowering plants and non-flowering plants. Pupils could begin to put vertebrate animals into groups such as fish, amphibians, reptiles, birds, and mammals; and invertebrates into snails and slugs, worms, spiders, and insects. Plants can be grouped into categories such as flowering plants (including grasses) and non-flowering plants, such as ferns and mosses. Pupils should explore examples of human impact (both positive and negative) on environments, for example, the positive effects of nature reserves, ecologically planned parks, or garden ponds, and the negative effects of population and development, litter or deforestation. Working Scientifically: using and making simple guides or keys to explore and identify local plants and animals; making a guide to local living things; raising and answering questions based on their observations of animals and what they have found out about other animals that they have researched.
Year 5	LH8: describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. LH9: describe the life process of reproduction in some plants and animals. Notes: Pupils should study and raise questions about their local environment throughout the year. They should observe life-cycle changes in a variety of living things, for example, plants in the vegetable garden or flower border, and animals in the local environment. They should find out about the work of naturalists and animal behaviourists, for example, David Attenborough and Jane Goodall. Pupils should find out about different types of reproduction, including sexual and asexual reproduction in plants, and sexual reproduction in animals. Working Scientifically: observing and comparing the life cycles of plants and animals in their local environment with other plants and animals around the world (in the rainforest, in the oceans, in desert areas and in prehistoric times), asking pertinent questions and suggesting reasons for similarities and differences. They might try to grow new plants from different parts of the parent plant, for example, seeds, stem and root cuttings, tubers, bulbs. They might observe changes in an animal over a period of time (for example, by hatching and rearing chicks), comparing how different animals reproduce and grow.
Year 6	<u>Living things and their habitats</u> LH10: describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals.

	LH11: give reasons for classifying plants and animals based on specific characteristics. Notes: Pupils should build on their learning about grouping living things in year 4 by looking at the classification system in more detail. They should be introduced to the idea that broad groupings, such as micro-organisms, plants and animals can be subdivided. Through direct observations where possible, they should classify animals into commonly found invertebrates (such as insects, spiders, snails, worms) and vertebrates (fish, amphibians, reptiles, birds and mammals). They should discuss reasons why living things are placed in one group and not another. Pupils might find out about the significance of the work of scientists such as Carl Linnaeus, a pioneer of classification. Working Scientifically: using classification systems and keys to identify some animals and plants in the immediate environment. They could research unfamiliar animals and plants from a broad range of other habitats and decide where they belong in the classification system.
--	--

Rocks	Progression
Year 1	No content

Year 2	No content
Year 3	R1: compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. R2: describe in simple terms how fossils are formed when things that have lived are trapped within rock. R3: recognise that soils are made from rocks and organic matter. Cross curricula link: geography, pupils should explore different kinds of rocks and soils, including those in the local environment. Working Scientifically: observing rocks, including those used in buildings and gravestones, and exploring how and why they might have changed over time; using a hand lens or microscope to help them to identify and classify rocks according to whether they have grains or crystals, and whether they have fossils in them. Pupils might research and discuss the different kinds of living things whose fossils are found in sedimentary rock and explore how fossils are formed. Pupils could explore different soils and identify similarities and differences between them and investigate what happens when rocks are rubbed together or what changes occur when they are in water. They can raise and answer questions about the way soils are formed.
Year 4	No content
Year 5	No content
Year 6	No content

Light	Progression
Year 1	No content

Year 2	No content
Year 3	L1: recognise that they need light in order to see things and that dark is the absence of light. L2: notice that light is reflected from surfaces. L3: recognise that light from the sun can be dangerous and that there are ways to protect their eyes. L4: recognise that shadows are formed when the light from a light source is blocked by an opaque object. L5: find patterns in the way that the size of shadows change. Notes: explore what happens when light reflects off a mirror or other reflective surfaces, including playing mirror games to help them to answer questions about how light behaves. They should think about why it is important to protect their eyes from bright lights. They should look for, and measure, shadows, and find out how they are formed and what might cause the shadows to change. Note: Pupils should be warned that it is not safe to look directly at the Sun, even when wearing dark glasses.
Year 4	No content
Year 5	No content
Year 6	L6: recognise that light appears to travel in straight lines. L7: use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. L8: explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes. L9: use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them. Notes: Pupils should build on the work on light in year 3, exploring the way that light behaves, including light sources, reflection and shadows. They should talk about what happens and make predictions. Working Scientifically: deciding where to place rear-view mirrors on cars; designing and making a periscope and using the idea that light appears to travel in straight lines to explain how it works. They might investigate the relationship between light sources, objects and shadows by using shadow puppets. They could extend their experience of light by looking a range of phenomena including rainbows, colours on soap bubbles, objects looking bent in water and coloured filters (they do not need to explain why these phenomena occur).

Forces	Progression	
	CAUTION: MAGNETS MUST NOT BE PLACED NEAR TO DIABETIC INSULIN PUMPS	

EYFS	EYF: Allow the children to explore the scientific properties of magnets in a way that's simple, but which also prompts questioning and develops understanding.	
Year 1	No content	
Year 2	No content	
Year 3	F1: compare how things move on different surfaces. F2: notice that some forces need contact between two objects, but magnetic forces can act at a distance. F3: observe how magnets attract or repel each other and attract some materials and not others. F4: compare and group together a variety of everyday materials the basis of whether they are attracted to a magnet, and identify some magnetic materials. F5: describe magnets as having two poles. F6: predict whether two magnets will attract or repel each other, depending on which poles are facing. Notes: Pupils should observe that magnetic forces can act without direct contact, unlike most forces, where direct contact is necessary (for example, opening a door, pushing a swing). They should explore the behaviour and everyday uses of different magnets (for example, bar, ring, button and horseshoe). Working Scientifically: comparing how different things move and grouping them; raising questions and carrying out tests to find out how far things move on different surfaces and gathering and recording data to find answers their questions; exploring the strengths of different magnets and finding a fair way to compare them; sorting materials into those that are magnetic and those that are not; looking for patterns in the way that magnets behave in relation to each other and what might affect this, for example, the strength of the magnet or which pole faces another; identifying how these properties make magnets useful in everyday items and suggesting creative uses for different magnets.	
Year 4	No content	
Year 5	F7: explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object. F8: identify the effects of air resistance, water resistance and friction, that act between moving surfaces. F9: recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect. Notes: Pupils should explore falling objects and raise questions about the effects of air resistance. They should explore the effects of air resistance by observing how different objects such as parachutes and sycamore seeds fall. They should experience forces that make things begin to move, get faster or slow down. Pupils should explore the effects of friction on movement and find out how it slows or stops moving objects, for example, by observing the effects of a brake on a bicycle wheel. Pupils should explore the effects of levers, pulleys and simple machines on movement. Pupils might find out how scientists, for example, Galileo Galilei and Isaac Newton helped to develop the theory of gravitation. Working Scientifically: exploring falling paper cones or cup-cake cases, and designing and making a variety of parachutes and carrying out fair tests to determine which designs are the most effective. They might explore resistance in water by making and testing boats of different shapes. They might design and make products that use levers, pulleys, gears and/or springs and explore their effects.	
Year 6	No content	

States of Matter	Progression
-------------------------	--------------------

Year 1	No content
Year 2	No content
Year 3	No content
Year 4	SM1: compare and group materials together, according to whether they are solids, liquids or gases. SM2: observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C). SM3: identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature. Notes: Pupils should explore a variety of everyday materials and develop simple descriptions of the states of matter (solids hold their shape; liquids form a pool not a pile; gases escape from an unsealed container). Pupils should observe water as a solid, a liquid and a gas and should note the changes to water when it is heated or cooled. Teachers should avoid using materials where heating is associated with chemical change, for example, through baking or burning. Working Scientifically: grouping and classifying a variety of different materials; exploring the effect of temperature on substances such as chocolate, butter, cream (for example, to make food such as chocolate crispy cakes and ice-cream for a party). They could research the temperature at which materials change state, for example, when iron melts or when oxygen condenses into a liquid. They might observe and record evaporation over a period of time, for example, a puddle in the playground or washing on a line and investigate the effect of temperature on washing drying or snowmen melting.
Year 5	No content
Year 6	No content

Sound	Progression
--------------	--------------------

EYFS	EYS: Provide opportunities for the children to explore the sounds of a range of musical instruments. Allow the children to explore making sounds with the resources around them.
Year 1	No content
Year 2	No content
Year 3	No content
Year 4	S1: identify how sounds are made, associating some of them with something vibrating. S2: recognise that vibrations from sounds travel through a medium to the ear. S3: find patterns between the pitch of a sound and features of the object that produced it. S4: find patterns between the volume of a sound and the strength of the vibrations that produced it. S5: recognise that sounds get fainter as the distance from the sound source increases. Notes: Pupils should explore and identify the way sound is made through vibration in a range of different musical instruments from around the world; and find out how the pitch and volume of sounds can be changed in a variety of ways. Working Scientifically: finding patterns in the sounds that are made by different objects such as saucepan lids of different sizes or elastic bands of different thicknesses. They might make earmuffs from a variety of different materials to investigate which provides the best insulation against sound. They could make and play their own instruments by using what they have found out about pitch and volume.
Year 5	No content
Year 6	No content

Electricity	Progression
Year 1	No content

Year 2	No content
Year 3	No content
Year 4	E1: identify common appliances that run on electricity. E2: construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. E3: identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. E4: recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. E5: recognise some common conductors and insulators, and associate metals with being good conductors. Notes: Pupils should construct simple series circuits, trying different components, for example, bulbs, buzzers and motors, and including switches, and use their circuits to create simple devices. Pupils should draw the circuit as a pictorial representation, not necessarily using conventional circuit symbols at this stage; these will be introduced in year 6. Note: Pupils might use the terms current and voltage, but these should not be introduced or defined formally at this stage. Pupils should be taught about precautions for working safely with electricity. Working Scientifically: Pupils might work scientifically by: observing patterns, for example, that bulbs get brighter if more cells are added, that metals tend to be conductors of electricity, and that some materials can and some cannot be used to connect across a gap in a circuit.
Year 5	No content
Year 6	E6: associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit. E7: compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches. E8: use recognised symbols when representing a simple circuit in a diagram. Notes: Building on their work in year 4, pupils should construct simple series circuits, to help them to answer questions about what happens when they try different components, for example, switches, bulbs, buzzers and motors. They should learn how to represent a simple circuit in a diagram using recognised symbols. Note: Pupils are expected to learn only about series circuits, not parallel circuits. Pupils should be taught to take the necessary precautions for working safely with electricity. Working Scientifically: Pupils might work scientifically by: systematically identifying the effect of changing one component at a time in a circuit; designing and making a set of traffic lights, a burglar alarm or some other useful circuit.

Earth and space	Progression
------------------------	--------------------

Year 1	No content
Year 2	No content
Year 3	No content
Year 4	No content
Year 5	ES1: describe the movement of the Earth, and other planets, relative to the Sun in the solar system. ES2: describe the movement of the Moon relative to the Earth. ES3: describe the Sun, Earth and Moon as approximately spherical bodies. ES4: use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky. Notes: Pupils should be introduced to a model of the Sun and Earth that enables them to explain day and night. Pupils should learn that the Sun is a star at the centre of our solar system and that it has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune (Pluto was reclassified as a 'dwarf planet' in 2006). They should understand that a moon is a celestial body that orbits a planet (Earth has one moon; Jupiter has four large moons and numerous smaller ones). Pupils should be warned that it is not safe to look directly at the Sun, even when wearing dark glasses. Pupils should find out about the way that ideas about the solar system have developed, understanding how the geocentric model of the solar system gave way to the heliocentric model by considering the work of scientists such as Ptolemy, Alhazen and Copernicus. Working Scientifically: comparing the time of day at different places on the Earth through internet links and direct communication; creating simple models of the solar system; constructing simple shadow clocks and sundials, calibrated to show midday and the start and end of the school day; finding out why some people think that structures such as Stonehenge might have been used as astronomical clocks.
Year 6	No content

Evolution and inheritance	Progression
Year 1	No content

Year 2	No content
Year 3	No content
Year 4	No content
Year 5	No content
Year 6	EH1: recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago. EH2: recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents. EH3: identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution. Notes: Building on what they learned about fossils in the topic on rocks in year 3, pupils should find out more about how living things on earth have changed over time. They should be introduced to the idea that characteristics are passed from parents to their offspring, for instance by considering different breeds of dogs, and what happens when, for example, Labradors are crossed with poodles. They should also appreciate that variation in offspring over time can make animals more or less able to survive in particular environments, for example, by exploring how giraffes' necks got longer, or the development of insulating fur on the arctic fox. Pupils might find out about the work of paleontologists such as Mary Anning and about how Charles Darwin and Alfred Wallace developed their ideas on evolution. Note: At this stage, pupils are not expected to understand how genes and chromosomes work. Working Scientifically: observing and raising questions about local animals and how they are adapted to their environment; comparing how some living things are adapted to survive in extreme conditions, for example, cactuses, penguins and camels. They might analyse the advantages and disadvantages of specific adaptations, such as being on two feet rather than four, having a long or a short beak, having gills or lungs, tendrils on climbing plants, brightly coloured and scented flowers.

Working Scientifically	NC Content	Progression
EYFS	To begin to ask simple questions.	See supporting material

	To explore and observe.	
Key Stage 1	The principal focus of science teaching in key stage 1 is to enable pupils to experience and observe phenomena, looking more closely at the natural and humanly-constructed world around them. They should be encouraged to be curious and ask questions about what they notice. They should be helped to develop their understanding of scientific ideas by using different types of scientific enquiry to answer their own questions, including observing changes over a period of time, noticing patterns, grouping and classifying things, carrying out simple comparative tests, and finding things out using secondary sources of information. They should begin to use simple scientific language to talk about what they have found out and communicate their ideas to a range of audiences in a variety of ways. Most of the learning about science should be done through the use of first-hand practical experiences, but there should also be some use of appropriate secondary sources, such as books, photographs and videos.	Key Skills • Observing changes over a period of time • Noticing patterns • Grouping and classifying • Carrying out simple comparative tests • Research using secondary sources of information Disciplinary Knowledge • Asking simple questions • Identifying and classifying • Gathering and recording data • Observing closely using simple equipment e.g. hand lens • Using observations and ideas to suggest answers to questions
Lower Key Stage 2	The principal focus of science teaching in lower key stage 2 is to enable pupils to broaden their scientific view of the world around them. They should do this through exploring, talking about, testing and developing ideas about everyday phenomena and the relationships between living things and familiar environments, and by beginning to develop their ideas about functions, relationships and interactions. They should ask their own questions about what they observe and make some decisions about which types of scientific enquiry are likely to be the best ways of answering them, including observing changes over time, noticing patterns, grouping and classifying things, carrying out simple comparative and fair tests and finding things out using secondary sources of information. They should draw simple conclusions and use some scientific language, first, to talk about and, later, to write about what they have found out. 'Working scientifically' is described separately at the beginning of the programme of study, but must always be taught through and clearly related to substantive science content in the programme of study. Throughout the notes and guidance, examples show how scientific methods and skills might be linked to specific elements of the content. Pupils should read and spell scientific vocabulary correctly and with confidence, using their growing word reading and spelling knowledge.	Key Skills • Observing changes over a period of time • Noticing patterns • Grouping and classifying • Carrying out simple comparative fair tests • Research using secondary sources of information • Draw simple conclusions using some scientific language Disciplinary Knowledge • Using different types of scientific enquiries to answer questions • Setting up fair tests and making predictions • Taking accurate measurements using standard units • Use a range of equipment, e.g. thermometer • Recording findings using bar charts, keys, tables, labelled diagrams • Draw conclusions

		• Make predictions for new values • Suggest improvements
Upper Key Stage 2	The principal focus of science teaching in upper key stage 2 is to enable pupils to develop a deeper understanding of a wide range of scientific ideas. They should do this through exploring and talking about their ideas; asking their own questions about scientific phenomena; and analysing functions, relationships and interactions more systematically. At upper key stage 2, they should encounter more abstract ideas and begin to recognise how these ideas help them to understand and predict how the world operates. They should also begin to recognise that scientific ideas change and develop over time. They should select the most appropriate ways to answer science questions using different types of scientific enquiry, including observing changes over different periods of time, noticing patterns, grouping and classifying things, carrying out comparative and fair tests and finding things out using a wide range of secondary sources of information. Pupils should draw conclusions based on their data and observations, use evidence to justify their ideas, and use their scientific knowledge and understanding to explain their findings. 'Working and thinking scientifically' is described separately at the beginning of the programme of study, but must always be taught through and clearly related to substantive science content in the programme of study. Throughout the notes and guidance, examples show how scientific methods and skills might be linked to specific elements of the content. Pupils should read, spell and pronounce scientific vocabulary correctly.	Key Skills • Noticing patterns • Grouping and classifying • Carrying out comparative fair tests • Observing changes over different periods of time • Make predictions • Understand that scientific findings may change over time • Finding things out using a wide range of secondary resources • Draw conclusions based on data and observations, use evidence to justify ideas and use scientific knowledge and understanding to explain findings • Carry out scientific enquiry including identifying independent, dependent and control variables. Disciplinary Knowledge • Planning different types of scientific enquiries • Recognising and controlling variables • Taking measurements with increasing accuracy and precision • Taking repeat readings • Scatter graphs, line graphs, casual relationships • Identifying scientific evidence used to support or refute ideas or arguments
